## 's guide

### ction

This instrument is made under paragraph 52D(2)(b) of the *Therapeutic Goods Act 1989* (the **Act**), and is a compilation of decisions made under section 52D of the Act. This instrument should be read in conjunction with the *Scheduling Policy Framework* (the **SPF**) of the Australian Health Ministers' Advisory Council. Further information on the scheduling amendments and the SPF can be viewed on the Therapeutic Goods Administration's website ([www.tga.gov.au](http://www.tga.gov.au)). Refer to section 6 for definitions of specific terms used in this document including “medicine” and “poison” (noting that the definition of poison includes medicine).

This instrument serves 2 key purposes.

Firstly, this instrument contains the decisions of the Secretary of the Department of Health and Ageing or the Secretary's delegates regarding the classification of poisons into Schedules, as recommendations to Australian States and Territories. The scheduling classification sets the level of control on the availability of poisons. The scheduling of poisons is implemented through relevant State and Territory legislation. Certain advertising, labelling and packaging requirements may also be a consequence of scheduling, but are the subject of other Commonwealth registration schemes.

Secondly, this instrument includes provisions for labelling, containers, storage, disposal, record-keeping, supply and possession of poisons in general which are intended to be adopted for use in each jurisdiction of Australia. Other government agencies may also impose controls on certain products.

The requirements for labelling and containers in this instrument are intended to integrate with existing legislative instruments for labelling and containers. Advertising, labelling and packaging of therapeutic goods and agricultural and veterinary chemicals are also dealt with through the respective product registration schemes provided for in Commonwealth legislation.

Poisons which are packed and sold solely for industrial, manufacturing, laboratory or dispensary use are exempt from all labelling requirements included in this instrument as they are covered by labelling requirements under applicable jurisdictional Work Health and Safety laws, as amended from time to time. Note, however that this exemption does not extend to controls on supply of these poisons.

This instrument is presented with a view to promoting uniform:

- scheduling of poisons throughout Australia; and
- signal headings on labels for poisons throughout Australia; and
- labelling and packaging requirements for poisons throughout Australia; and

- additional controls on the availability and use of poisons in Australia.

The various Commonwealth Acts, legislative instruments and other documents, which integrate with this instrument include the following:

- the Act;
- the *Agricultural and Veterinary Chemicals Code Act 1994*;
- the *Agricultural and Veterinary Chemicals Code Regulations 1995*;
- the *Therapeutic Goods Order No. 91 - Standard for labels of prescription and related medicines*;
- the *Therapeutic Goods Order No. 92 - Standard for labels of non-prescription medicines*;
- the *Therapeutic Goods (Standard for Medicinal Cannabis) (TGO 93) Order 2017*;
- the *Therapeutic Goods Order No. 95 - Child-resistant packaging requirements for medicines 2017* (TGO 95);
- the *Therapeutic Goods (Standard for Nicotine Vaping Products) (TGO 110) Order 2021*;
- the *Therapeutic Goods (Medicines Advisory Statements) Specification 2021 – Schedule 1 Required Advisory Statements for Medicine Labels No. 6* (RASML).

## ation

Poisons are classified according to the Schedules in which they are included. The following is a general description of the Schedules. For the legal definitions, however, it is necessary to check with each relevant State or Territory authority.

Schedule	Title	Description
Schedule 1	Blank	This Schedule is intentionally blank.
Schedule 2	Pharmacy medicines	Substances, the safe use of which may require advice from a pharmacist and which should be available from a pharmacy or, where a pharmacy service is not available, from a licensed person.
Schedule 3	Pharmacist only medicines	Substances, the safe use of which requires professional advice but which should be available to the public from a pharmacist without a prescription.
Schedule 4	Prescription only medicines and prescription animal remedies	Substances, the use or supply of which should be by or on the order of persons permitted by State or Territory legislation to prescribe and should be available from a pharmacist on prescription.
Schedule 5	Caution	Substances with a low potential for causing harm, the extent of which can be reduced through the use of appropriate packaging with simple warnings and safety directions on the label.
Schedule 6	Poisons	Substances with a moderate potential for causing harm, the extent of which can be reduced through the use of distinctive packaging with strong warnings and safety directions on the label.
Schedule 7	Dangerous poisons	Substances with a high potential for causing harm at low exposure and which require special precautions during manufacture, handling or use. These poisons should be available only to specialised or authorised users who have the skills necessary to handle them safely. Special regulations restricting their availability, possession, storage or use may apply.
Schedule 8	Controlled drugs	Substances which should be available for use but require restriction of manufacture, supply, distribution, possession and use to reduce abuse, misuse and physical or psychological dependence.
Schedule 9	Prohibited substances	Substances which may be abused or misused, the manufacture, possession, supply or use of which should be prohibited by law except when required for medical or scientific research, or for

Schedule	Title	Description
		analytical, teaching or training purposes with approval of Commonwealth and/or State or Territory Health Authorities.
Schedule 10 (previously Appendix C)	Substances of such danger to health as to warrant prohibition of supply and use	Substances which are prohibited for the purpose or purposes listed for each poison.

## es of scheduling

Poisons are not scheduled on the basis of a universal scale of toxicity. Although toxicity is one of the factors considered, and is itself a complex of factors, the decision to include a substance in a particular Schedule also takes into account many other criteria such as the purpose of use, potential for abuse, safety in use and the need for the substance.

This instrument lists poisons in 10 Schedules according to the degree of control recommended to be exercised over their availability to the public.

Poisons for therapeutic use (medicines) are mostly included in Schedules 2, 3, 4 and 8 with progression through these Schedules signifying increasingly restrictive regulatory controls.

For some medicines and agricultural, domestic and industrial poisons, Schedules 5, 6 and 7 represent increasingly stricter container and labelling requirements with special regulatory controls over the availability of the poisons listed in Schedule 7. Products for domestic use must not include poisons listed in Schedule 7.

Schedule 9 contains substances that should be available only for teaching, training, medical or scientific research including clinical trials conducted with the approval of Commonwealth and/or State and Territory health authorities. Although appearing as a Schedule in this instrument, the method by which it is implemented in the States and Territories may vary.

Schedule 10 (previously Appendix C) contains a list of substances or preparations, the supply or use of which should be prohibited because of their known dangerous properties.

Substances in products which have been considered for scheduling, but have been exempted from this instrument, may be listed in either Appendix A (general exemptions) or Appendix B (substances considered not to require control by scheduling).

## the schedules

Schedule entries have been designed to be as simple as possible while retaining readability, legal integrity and as much freedom from ambiguity and contradiction as possible. As a result, they are expressed in a number of ways, though this number has been kept to a minimum. It is necessary to keep this variety of expression in mind when searching or interpreting Schedule entries.

Firstly, poisons are scheduled individually using their approved names wherever practicable although exceptions are necessary in some cases. Some of those are mentioned below. Older group entries are revised and replaced by individual entries as time permits, although in some of these cases a group term has also been retained to deal with any members of the group or class that may have escaped attention but should be scheduled.

Secondly, Schedule entries have been expressed in either positive or negative terms and care must be taken to distinguish between the 2 different forms of expression. Thus, selenium is in Schedule 6 only when one of the clauses in this Schedule entry applies, while fluorides are in Schedule 6 unless one of the exempting clauses applies.

Where exceptions are included in an entry, these have been emphasised by printing the word “**except**” in bold type.

Where the Schedule entries for a poison make a specific exclusion or exemption, the requirements of this instrument do not apply to that poison within the constraints of that exclusion or exemption although controls under other legislation, such as pesticide registration, may apply.

Where a Schedule entry for a poison requires a specific statement to be included on a label as a condition for a product to qualify for an exemption (“reverse scheduling”), then in cases where it is impracticable for a supplier to use the exact wording of such a statement, its wording may be varied provided that the full intent and meaning of the statement is not changed.

Where a poison has been included in more than one Schedule, the principal entry, where practicable, has been included in the most restrictive Schedule with references to the other Schedule(s) involved.

It is important to remember that a Schedule entry includes preparations containing the poison in an amount in concentration and all salts and derivatives of the poison unless it specifically states otherwise (see section 7).

It is important to note that a substance is not classed as a derivative on the basis of a single, prescriptive set of criteria. Classification of a substance as a derivative of a scheduled poison relies on a balanced consideration of factors to decide if a substance has a similar nature (e.g. structurally, pharmacologically, and toxicologically) to a scheduled poison or is readily converted (either physically or chemically) to a scheduled poison. However, a substance is only considered a derivative of a scheduled poison if it is not individually listed elsewhere in the Schedules, or captured by a more restrictive group or class entry. Additionally, some entries specifically exclude derivatives. Once a substance is determined to be a derivative of a scheduled poison, the same

scheduling requirements as the scheduled poison, including limits on access, supply and availability will apply.

Finally, when using this instrument to determine the scheduling status of a poison, it may be necessary to search each relevant Schedule as well as Appendices A, B and the Index. In this process if the poison is not found under its “approved name” it may be shown under a group term such as:

Group	Example
the parent acid of salts	“oxalic acid” to find sodium oxalate
the radical of a salt	“chromates” to find potassium chromate
the element	“arsenic” to find arsenic trioxide
a chemical group with similar toxicological or pharmacological activity	“hydrocarbons, liquid” to find kerosene
a pharmacological group	“anabolic steroidal agents” to find “androsterone”

## **lity of poisons**

The purpose of classification is to group substances into Schedules that require similar regulatory controls over their availability.

These Schedules have been developed over a long period and contain poisons that may be obsolete for various reasons. Also, as part of the move to harmonise the Australian and New Zealand classifications, many substances have been added to the Schedules for that purpose, irrespective of their availability in either country.

Inclusion of a poison in a Schedule indicates the degree of control required if it is marketed. It does not:

- indicate that the poison is available; or
- indicate that it has been approved or is efficacious for any use that may be specified in a Schedule; or
- negate any obligation for registration of therapeutic goods, or agricultural or veterinary chemical product containing that poison.

## ices

## **x A (General exemptions)**

Appendix A lists preparations and products that are exempted from this instrument.

## **x B (Substances considered not to require control by scheduling)**

Substances for which the available information suggests that inclusion in the Poisons Schedules is not necessary, or not the most appropriate means of controlling the risk to public health, have been considered at various times.

Inclusion in Appendix B indicates that a decision has been taken not to include substances anywhere in the Schedules, either for a specific purpose, or generally. It is an inclusive, but not an exhaustive list (that is, there may be substances not included in the Schedules, and not included in Appendix E which may be hazardous or non-hazardous, but have not been considered in relation to the need for scheduling).

Substances may be included in Appendix B because they have intrinsically low toxicity, or where other factors suggest that the potential public health risk would be minimal. Factors which are considered when determining an Appendix B entry include:

- the toxicology profile was adequately characterised and not consistent with inclusion in any of the Schedules;
- the use, purpose or product presentation minimised any hazard to the public such as to not require scheduling; or
- the public access was limited such that scheduling was inappropriate or unnecessary.

The list of substances included in Appendix B was developed from scheduling files and historical records. For transparency, where the reason for entry and/or purpose or use for the substance was apparent in the consideration, this has been included in the columns “Reason for Entry” and “Area of Use”.

Inclusion in Appendix B will not prevent reconsideration of the scheduling of a substance where adverse information becomes available about the Appendix B entry for that substance.

Applications are considered for scheduling. Applications for inclusion in Appendix B will not be accepted.

**x C (blank)**

Appendix C is intentionally blank.

**x D (Additional controls on possession or supply of poisons included in Schedule 4 or 8)**

Appendix D lists poisons included in Schedule 4 or 8 where additional specified controls apply on possession or supply.

**x E (First aid instructions for poisons)**

Under poisons legislation, scheduled substances and their preparations are required to be labelled with appropriate directions for first aid attention in case of poisoning. It is the responsibility of the manufacturer, packer and supplier of a drug or poison to ensure that the first aid instructions included on the label of a poison are appropriate for a specific product. Standard statements have been prepared as a guide for health authorities and manufacturers in drafting suitable first aid directions for this purpose. Standard statements specified in Appendix E may be varied provided that the intent is not changed.

The directions listed for any particular substance may require modification to take into account combination of that substance with other substances, both toxic and non-toxic, in a formulation, as well as the physical form and presentation of the product. Any such modification should be concise and readily understood.

The First Aid Instructions include action to be taken in case of eye contamination from substances recognised as causing direct poisoning via the eye, causing severe eye damage or requiring prolonged flushing to free the absorbed substance from the eye tissue. However, it is recognised that many other substances or preparations will require a statement of varying nature depending on the detailed formulation. While the necessity to flush the eyes in case of accident will be so self-evident as not to justify label space in many instances, a statement such as “If in eyes rinse well with water” may be appropriate.

**x F (Warning statements and general safety directions for poisons)**

It is the responsibility of the manufacturer, packer and supplier of a drug or poison to ensure that the purchaser or user of a product is given sufficient information to be able to use it correctly and safely.

Under poisons legislation, scheduled substances, which may be harmful to the user, must be labelled with appropriate warning statements and/or safety directions. The selection of warning statements and safety directions will depend on the formulation of the product, and the use for which it is sold or supplied. Warning statements and safety directions have been prepared as a guide for this purpose.

The wording of warning statements and safety directions specified in Appendix F may be varied provided that the intent is not changed. Additional statements also may be added to ensure that the user of a product is sufficiently advised of its harmful nature and how to avoid any deleterious effects.

**x G (Dilute preparations)**

Appendix G lists concentration cut-offs for specified substances, below which the requirements of this instrument do not apply.

**x H (Schedule 3 medicines permitted to be advertised)**

Appendix H lists medicines included in Schedule 3 that are permitted to be advertised to the public

**x I (blank)**

Appendix I is intentionally blank.

**x J (Conditions for availability and use of certain poisons included in Schedule 7)**

All poisons included in Appendix J are not to be available except to authorised or licensed persons

The use of a poison may be restricted for a particular purpose. Controls recommended for the Schedule 7 poisons included in Appendix J may be implemented through poisons controls or other State or Territory legislation.

**x K (Human medicines required to be labelled with a sedation warning)**

Medicines for human use that contain a poison included in Appendix K are required to be labelled with a warning regarding their sedation potential.

**x L (Requirements for dispensing labels for medicines)**

Appendix L sets out the requirements for labels attached to medicines at the time of dispensing.

**x M (blank)**

Appendix M is intentionally blank and is reserved for future use.

**Information Centre telephone numbers for first aid instructions, warning statements and general safety directions for poisons**

Companies should use the Poisons Information Centre telephone number(s) (Australia 13 11 26; New Zealand 0800 764 766) appropriate to the country(ies) of sale for the product.

Companies wishing to use a poisons information centre telephone number other than the national telephone numbers for Australia and New Zealand must meet the following criteria:

1. the poisons information service whose number is used must be attended by adequately trained staff for 24 hour emergency poisons information; and
2. calls must be logged and submitted for incorporation into the official collection of poisoning data
